

Infant / Child Death Investigations

This course will discuss awareness information and procedures related to recognition and preservation of infant/child death scenes. Participants will be able to relate the application of procedures and responsibilities in the investigation of infant / child death investigations to include doll re-enactments. Topics include proper documentation, proper packaging and preservation of evidence, investigation requirements, forensics and toxicological studies and child death reviews. This course will focus on recommended and/or directed investigation protocols to follow, scene processing, mandated reporting information, death scene re-enactments, and child death reviews.

This course is intended to provide awareness level information to enhance understanding of interoperable agency cooperation in order to support comprehensive efforts as it relates to infant / child death investigations. Furthermore, this course will bring awareness and clarification to the recommended procedures to process the crime / death scene for later analysis, determination and case resolution.

Two practical lab sessions will be held, to reinforce the course discussion topics followed by a review and discussion. Participants should expect some graphic images of actual crime scenes as part of the course information. Students are encouraged to bring a digital camera to class.

Course code: FRNSC137

Instructor: Melissa Gogle
